(a) A dominant spanning tree

$t_e = s\, r_e \ (e \in \gamma), \quad t_e = r_e \ (e \notin \gamma)$

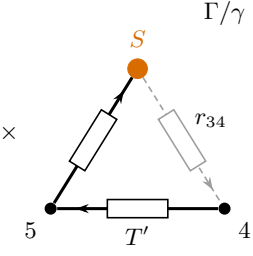

$\prod_{h \in \Gamma_1 \setminus T} t_h = t_{23} t_{34} = s\, r_{23} r_{34}$

(b) Leading order: $T = B \sqcup T'$

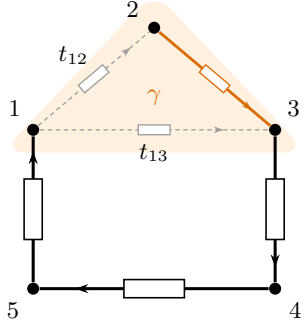

$\sum_B \prod_{h \in \gamma \setminus B} r_h = r_{12} + r_{13} + r_{23}$

$\times$

$\sum_{T'} \prod_{h \in (\Gamma_1 \setminus \gamma) \setminus T'} r_h = r_{34} + r_{45} + r_{51}$

(c) A subleading spanning tree

$T \cap \gamma = \{23\}$ does not span S

$\prod_{h \in \Gamma_1 \setminus T} t_h = t_{12} t_{13} = s^2 r_{12} r_{13}$

$$\sum_T \prod_{h \in \Gamma_1 \setminus T} t_h = s\big[(r_{12}+r_{13}+r_{23})(r_{34}+r_{45}+r_{51}) + s\, r_{13}(r_{12}+r_{23})\big], \qquad h_1(\gamma) = 1$$
