(a) A bypassed resistor

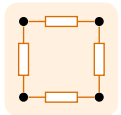

$t_{23}y_{23} = t_{13}y_{13} - t_{12}y_{12} \to 0$

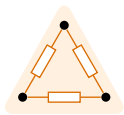

(b) Two islands

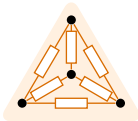

no current depends on $t_e/t_{e'}$

(c) The Laman count

	too few	Laman	too many
ratios	3	2	5
loop-current components	2	2	6

$|\Gamma_1[S]| - 1$ vs. $2(|\Gamma_1[S]| - |S| + 1)$
